Elements in a Sketch

- These are very important sketches, as these sketches help in cracking a design /concept to create a visual understanding.
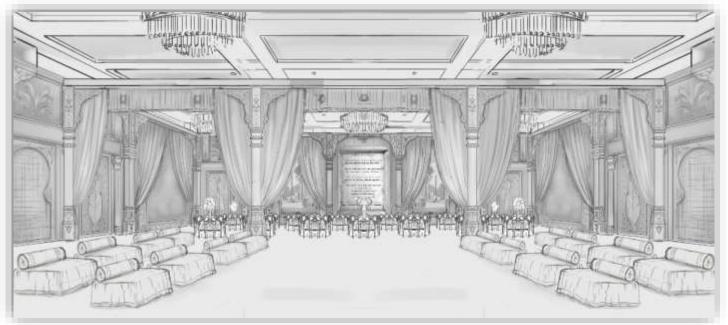

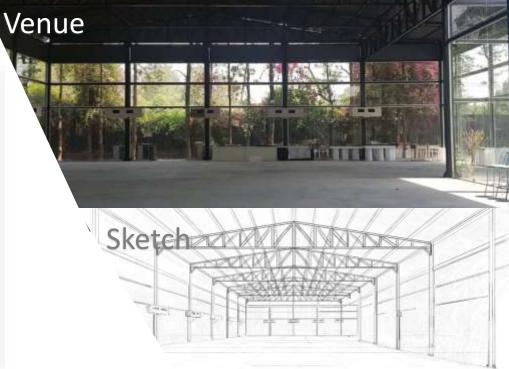

- These are great to sell a concept.

Perspective Visual in Sketch

- These perspective sketches in black and white are important to visualize the event space, look and feel.

- These are great to sell your design.

- Easy for the client to understand your vision.

Design

Venue

Sketch

Elements in Colored Sketch

- Individual elements in color (e.g. a stage ,a bar, an entrance etc.)

- These colored sketches help in explaining the look and feel on the designed element.

- These are second level of the design process.

# Perspectives in Colored Sketch

- These colored perspective sketches capture the look and the feel of the entire event space.

- Colors help understand the visuals better.

- These are second level of the design process.

CREATING YOUR VISION

Elements in a 3D Render

3D Stage Render
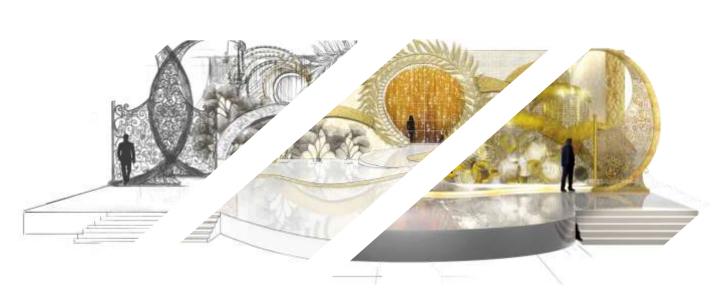

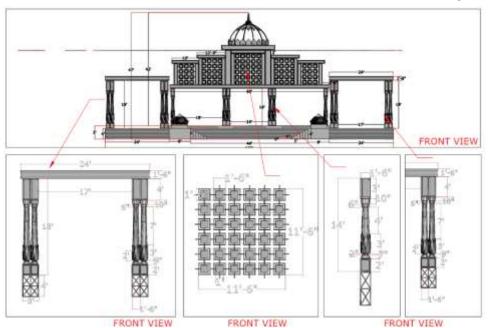

- Accurate 3d models and renders to the scale

- Technical/Production drawings with sizes to start the production of the element.

Production Drawings

3D designs and Renders

- These 3d designs of an event are made with precision and according to the technical layouts provided.

- The 3d renders from different visual points provide a very good sense of the event space and how exactly the decor is going to look like.

3D designs, 360 Visuals and Virtual Tours

- Viewing a perspective drawing or a renders is great, and turning those renders in a walkthrough or a virtual 360 space is amazing.

- Walkthroughs are great to see your event as you go along viewing the event décor in motion

- 360 VR (virtual reality) sketches and 3d designs are the most effective and impactful way of presenting an event concept/design.

- Just use a VR headset and you can see your design as if you are standing in the event space.
